PROFESSIONAL SUMMARY

Passionate Fullstack Engineering Learner with 3+ years of intensive software engineering experience. I build complete products — from database schema to Docker-deployed infrastructure to pixel-perfect frontends. Developed 30+ projects (learning, hackathons, and personal) including: Kay-Point, an ambitious multi-tenant SaaS architecture concept (23k+ lines of Go); TradeFlowSN, a logistics platform with 233 automated tests; and Generateur-d'architecture, a 7-starred Rust AI tool. Dedicated to open source contribution and helping idea generators materialize their vision. GMT timezone, clean documented code.

TECHNICAL SKILLS

Backend Languages: Go, Java 17, Rust, TypeScript, Node.js, Python, C
Backend Frameworks: Gin, Spring Boot 3.x, Spring Cloud, Axum, Tokio, GORM, Hibernate
Frontend: React 19, Angular 17, Next.js, Flutter, React Native, Tailwind CSS 4, Vite, Zustand
Databases: PostgreSQL 16, Neo4j, Redis 7, TimescaleDB, MySQL, MinIO
Architecture: Multi-Tenant SaaS, Clean Architecture, Microservices, Event-Driven, API Gateway
DevOps & Cloud: Docker, Docker Compose, GitHub Actions, Jenkins, Nginx, Prometheus, Grafana, Loki, Linux
Security: JWT, bcrypt, RBAC, 2FA, Audit Trail, Rate Limiting, OWASP compliance
Testing: Go Test, JUnit, Cargo Test, Testify, 233+ test suites in production, TDD

PROFESSIONAL EXPERIENCE

Fullstack Engineering Learner *Jan 2023 – April 2026*
01 Talent Senegal – Zone 01 Dakar *Dakar, Senegal*

- Developed 30+ fullstack projects across Go, Java, Rust, and TypeScript stacks through intensive peer-to-peer learning, focusing on architecture, testing, and deployment.
- Architected Kay-Point, an ambitious multi-tenant SaaS concept designed as a large-scale architecture exercise with 23,300+ lines of Go, React 19 web dashboard, and Flutter mobile app.
- Designed hierarchical user roles, GPS geolocation check-in (Haversine formula), full audit trails, and JWT/2FA authentication for various projects.
- Built and deployed TradeFlowSN, a container logistics SaaS live at tradeflowsn.com with 233 automated tests, multi-currency conversion (EUR/USD/XOF), JWT/RBAC security, and Jenkins CI/CD.
- Published Generateur-d-architecture (7 GitHub stars), a Rust desktop app with Material Design 3 UI and Google Gemini AI integration.
- Designed agile-factory-kernel, a multi-tenant SaaS boilerplate in Go 1.25 following Clean Architecture.
- Gained extensive experience in Docker containerization and automated GitHub Actions/Jenkins CI/CD pipelines to streamline deployment processes.
- Actively participated in peer-to-peer pedagogy, conducting code reviews and pair programming on Go, Rust, and Java best practices.

SELECTED PROJECTS

Kay-Point | Architecture Concept *2025*
Ambitious Multi-Tenant SaaS Exercise Go (Gin) | React 19 | Flutter | PostgreSQL 16 | Redis 7 | Prometheus/Grafana/Loki

- Large-scale SaaS concept for teacher attendance management. 23k+ lines of Clean Architecture Go backend. 8 user roles. Haversine geolocation. Offline-capable Flutter app with WebRTC. GitHub Actions CI.

TradeFlowSN | Live at tradeflowsn.com *2025*
Container Logistics SaaS Go 1.24 | React 18 | PostgreSQL | Redis | Jenkins CI/CD | 233 tests

- Fullstack import-export platform with multi-container tracking, automated EUR/USD/XOF conversion, RBAC security, and real-time KPI dashboards. Deployed with zero-downtime CI/CD.

Generateur-d'architecture *2025*
AI-Powered Project Scaffolder | 7 GitHub Stars Rust | Slint GUI | Gemini 2.0 Flash | Material Design 3

- Desktop app + CLI that generates project structures from README descriptions via Google Gemini AI. Pre-built templates for Rust, Python, Web, CLI, Microservice projects.

Agile-Factory-Kernel *2025*
Multi-Tenant SaaS Boilerplate for Go Go 1.25 | Clean Architecture | net/http | log/slog | Zero Framework Dependencies

- Production-grade kernel/platform/modules architecture. Structured fan-out logging. Reduced new project setup from 2 weeks to 2 days.

KEY AREAS OF EXPERTISE

Backend Development: REST APIs, Microservices, Database Design, Performance Optimization
Fullstack Development: SaaS platforms, MVP from zero to production, Real-time dashboards
Architecture: Multi-Tenant design, Clean Architecture, Event-Driven systems
DevOps: Docker deployment, CI/CD pipeline setup, Monitoring (Prometheus/Grafana)
Tech Stack Flexibility: Go, Java, Rust, TypeScript — I adapt to your existing stack

CERTIFICATIONS

Hedera Certified Developer 2025
Hedera Hashgraph – HCS, HTS

Java Development Certificate April 2025
01 Talent Senegal – Advanced Java 17, Spring Boot, Microservices

EDUCATION

Lycee Demba Diop – Mbour 2018 – 2021
Baccalaureate in Science (S2) – Mathematics & Physics

LANGUAGES

French (Native) | Wolof (Native) | English (Professional Working Proficiency)
